ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a wrapping multilayer film with an excellent pinhole resistance, transparency, gas barrier property and moldability at well as a moderate pliability and good label adaptability.

SOLUTION: In this laminate film, the outermost layer consists of a polypropylene resin and SEBS block copolymer, and an oxygen-barrier layer consists of any one constitution of (1)-(5), i.e., (1) an ethylene vinyl acetate copolymer saponified substance (refer to EVOH hereinafter) and modified ionomer, (2) EVOH, ionomer, and polyamide, (3) vinyliden chloride resin, (4) polyacrylonitrile or unsaturated nitrile resin, or (5) aromatic polyamide resin, and a seal layer being an outermost layer consists of VLDPE.

ABSTRACTED-PUB-NO: JP 09314772A

BASIC-ABSTRACT:

The film includes polypropylene resin and styrene-ethylene, butylene-styrene block copolymer comprising an outer layer. A sealing layer is formed on inner layer that consists of super low density polyethylene. An oxygen barrier layer that consists of five compounds is formed as an intermediate layer between the outer layer and the inner layer. The five compounds constituting the oxygen barrier layer are ethylene-vinyl acetate copolymer, an ionomer and polyamide, chloride-vinylidene resin, polyacrylonitrile or unsaturated nitrile resin, and aromatic polyamide resin.

ADVANTAGE - Prevents generation of clearance. Possesses transparent, gas barrier property and mouldability.
